We all Need to Teach Other Safe Ways to Show the Sun

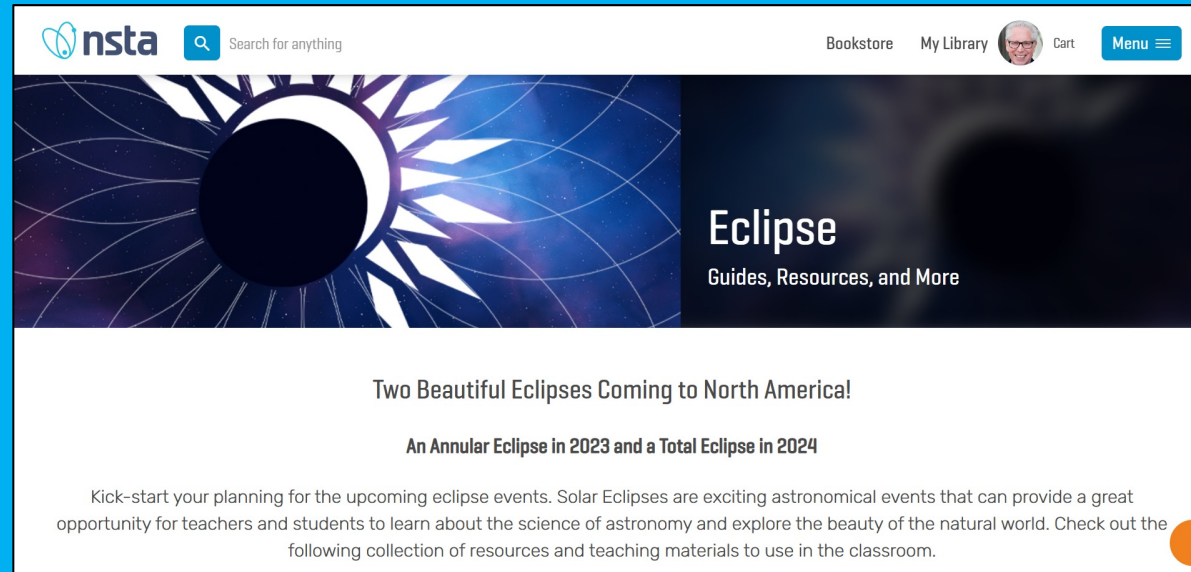

What NSTA/SSI Eclipse Partners Are Doing + Resources from NSTA for Educators

Dennis Schatz

Past President, National Science Teaching Association (NSTA)

Examples from the 275 NSTA/SSI Solar Eclipse Partners

The screenshot shows the NSTA website header with the logo, a search bar, and navigation links for Bookstore, My Library, Cart, and Menu. The main content area features a large image of a solar eclipse with the word "Eclipse" and the subtitle "Guides, Resources, and More". Below this, a section titled "Two Beautiful Eclipses Coming to North America!" highlights "An Annular Eclipse in 2023 and a Total Eclipse in 2024". The text encourages educators to use the provided resources for classroom learning.

Become a NSTA/SSI Solar Eclipse Partner

NSTA and the Space Science Institute (SSI) are looking for educators of science interested in assisting their schools, libraries, and other community organizations in getting the public ready to experience the eclipses safely. Participants receive free NSTA membership.

 Due to Overwhelming Demand,
Link is Closed

What We Ask NSTA/SSI Eclipse Partners to Do

1. Partner with local libraries and other community organizations to offer at least two public programs, viewing sessions, and/or other appropriate engagements during the time leading up to the 2024 total solar eclipse.

Appropriate activities should include information about:

- a) The time of the eclipse in your location and elsewhere in the U.S.
- b) Safe eclipse viewing techniques.
- c) An understanding of what causes solar eclipses.

2. Provide the information about the eclipse to other teachers in your school and district, as well as to the administrators who might have questions about how the school should organize for the total eclipse in 2024.

Many Over Achievers

Deborah Skapik

Pronouns: she/her

Year: Teacher

Teams: Everything??

Bio: DEBORAH L. SKAPIK (she/her) is the Moonshadow Team founder and director. She is a [NASA Partner Eclipse Ambassador](#). She currently teaches physics and astronomy at Friends' Central School in Wynnewood, PA and is an adjunct professor of astronomy at St. Joseph's University. She is the mom of three amazing humans (plus three cats) and wife of an incredible guy who tolerates her insatiable curiosity for the universe, her experiments with sourdough bread and her service as a Christ Servant Minister in the United Methodist Church. Deb's eclipse guide for educators, "Look UP, Below!" is available at <https://tinyurl.com/debseclipsebook>. Follow her on instagram @deb_makes_bread

Astrid

Year:12

Pronouns:she/they

Teams:Research, Public Speaking

Bio: I'm interested in research and will lead it with Quin. I want to learn more about eclipses and the scientific history behind them. I'm good with setting up tech for events.

Andrew

Year:11

Pronouns:he/him

Teams:Telescopes, Website Building, Event Planning, Photography

Bio: I can help with really anything, be it media creation for workshops, behind the scenes planning, working with children, tech telescope stuff, presentations, etc. Anything works for me! FAST, Linux Club, Science Core, Robotics | Tennis, Squash. I like breaking and maybe fixing really old things. I'm pressured to put up a dog or cat, but I possess of neither, but I do have a fish.

Tomato + Egg + Rice and I'll be happy for life.

Stevenson School in Pacific Grove, CA

Program 1 - Local Farmers Market on four successive Tuesdays from 9/19-10/3 in cooperation with local public library booth.

Program 2 - Presentations to after school programs at two Boys & Girls Clubhouses on 9/28 and 10/4.

Program 3 - Presentation at Monterey Public Library 10/7.

Program 4 - Parent Presentation the night before the Annular Eclipse at our Parent Conference weekend 10/13

Program 5 - Viewing Party during Saturday Morning Parent Conferences 10/14

Program 6 - Local Museum "Space Camp" presentation, grades 2-6, 7/12.

Program 7 - School Alumni Association Presentation 6/18.

Paul Duke STEM High School, Duluth, GA

Eclipse Event Plans

- Three-minute spiel on upcoming eclipses
- Sun spotter to project image of sun
- Eclipse modeling activity
- Printed NSTA eclipse handout
- Prepared solar viewer kits
- Solar eclipse chalk art (from STARnet)

Paul Duke STEM High School, Duluth, GA

School: We will host an eclipse viewing event on October 14 as part of "The Hidden Sun Festival". We will serve our local community (all ages).

Public Library: Friday, September 15 - "Annular Eclipse Party" event at Norcross Public Library Branch. We will be serving students ages 6 - 11 and their guardians.

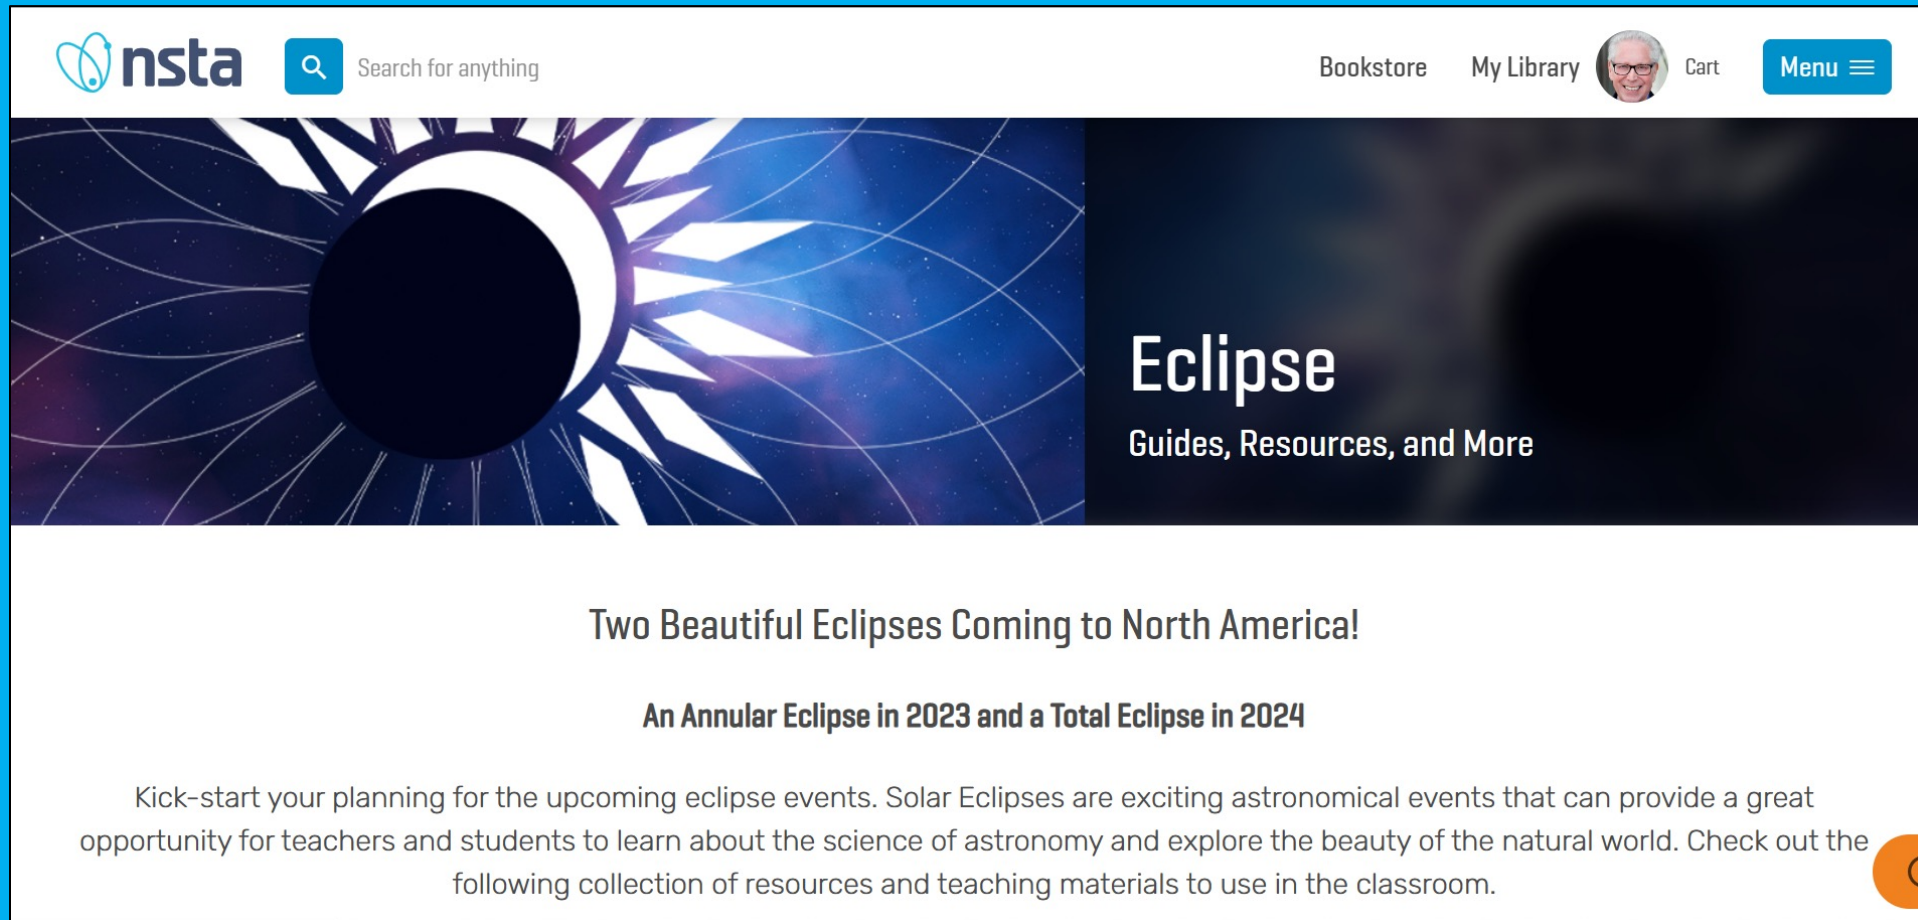

Community Organization: Partnered with local township (Duluth) in 3 Fridays-N-Duluth events. Hosted a tent of information called "Eclipse Information" where locals received printed flyers about the two eclipses this school year. Brought a Sunspotter to give live viewings of the sun. Provided pinhole viewer kits for attendees and engaged the youngest children in creating solar corona chalk art.

Students Selling Glasses for a Profit to Support School Activities

A group of students and I were able to get money fronted to us to purchase (legit) eclipse viewing glasses. We sold them for \$1 and made a small profit for future projects. We taped a small flyer to each pair to help communicate the details of our viewing times. It was really fun and we easily sold out (500 pairs).

NSTA Solar Eclipse Resource Website

The screenshot shows the NSTA website header with the logo, a search bar, and navigation links for Bookstore, My Library, a user profile, and a Cart. The main banner features a stylized solar eclipse graphic and the text "Eclipse Guides, Resources, and More". Below the banner, a central text block reads "Two Beautiful Eclipses Coming to North America! An Annular Eclipse in 2023 and a Total Eclipse in 2024". A paragraph below that encourages planning for the events. A QR code is located in the bottom right corner of the website screenshot.

The Great American Annular Eclipse of the Sun

Saturday, October 14, 2023

An Information Sheet by astronomers/educators Dennis Schatz & Andrew Fraknoi
Distributed courtesy of the National Science Teaching Association

On Oct. 14, 2023, there will be a dramatic annular eclipse visible to people on a narrow path from Oregon going southeast to Texas (see map below). A partial eclipse of the Sun will be visible to everyone in North and Central America, with a bigger "bite" taken out of the Sun the closer you are to the path of the annular eclipse.

In this kind of eclipse, the Moon gets in front of the Sun, but it is too far away and, therefore, too small to cover it completely, leaving an annulus (or ring of fire) around the dark disk of the Moon.

We talked about the annular eclipse in class, so your child should be able to tell you more about what to expect. On the next page is the information for what will happen in our location.

The path of the annular eclipse. (Photo: Kasper Zuber)

Most people in North America will see a partial eclipse.
Photo by Tomruen

Only those people in the narrow path of annularity will see the annular eclipse.

NSTA SOLAR ECLIPSE GUIDE FOR EDUCATORS

A Solar Eclipse Double-Header

October 14, 2023 and April 8, 2024

By Dennis Schatz and Andrew Fraknoi

Many people in the U.S. experienced the celestial beauty and sense of wonder of the 2017 total eclipse of the Sun. As the Moon crossed in front of the Sun, the Sun went dark, and the day suddenly turned into night. Whether you saw it or not, we have good news. Two solar eclipses are coming to North America soon—a "Double-Header"—on Saturday, October 14, 2023 (an annular—or ring-of-fire—eclipse) and Monday, April 8, 2024 (a total eclipse). Everyone not on the narrow eclipse path in North America will see a partial eclipse on both dates, where the Moon covers part of the Sun's surface.

To see the ring-of-fire during the annular eclipse, you will need to be in a 100-mile-wide path that stretches from the coast of Oregon to the southeast coast of Texas.

To see the solar corona (the Sun's faint atmosphere) during the total eclipse, you need to be in a 150-mile-wide path that starts in Mexico, enters the U.S. in Texas and moves northeast through a number of states until leaving the U.S. from New York. From there it moves on to the eastern part of Canada.

Rarely does nature offer us such wonderful teachable moments, when our students can experience key science concepts while observing a spectacular sky event first hand. This Guide gives you the key information and links to other resources you need, so that you, your students, and your community can make the most of these two eclipses.

The following clickable Table of Contents allows you to go directly to each topic.

May you have clear skies and enthusiastic learners during the two eclipses.

Solar Eclipse Double-Header in October 2023 and April 2024

What School Administrators and Other Education Leaders Need to Know

Many people in the U.S. experienced the beauty and sense of wonder of the 2017 total eclipse—when the Moon crossed in front of the Sun. The Sun went dark, and the day turned into night. Now is the time to prepare for the next solar eclipses in North America—a "Double-Header" on Saturday, October 14, 2023 (an annular—or ring-of-fire—eclipse) and Monday, April 8, 2024 (a total eclipse). Rarely does nature offer us such clear teachable moments, when our students can experience key science concepts while observing a spectacular celestial event first hand.

In 2017, many administrators were unprepared when their science teachers asked to take students outside to view the eclipse. So, for the upcoming eclipses, we've prepared this document to give you the background you need to help your teachers make the two eclipses an unforgettable learning experience.

What to Tell Administrators

It is important to inform your school administrators EARLY and OFTEN regarding your plans related to the eclipses. Share the NSTA Administrators Guide and emphasize three things:

Eclipses are a Wonderful Learning Experience

Daytime Moon

Eclipses are Safe to View

Article in *Eclipse Retinopathy* in the journal *Eye* (2001)
15,148-151 © 2001 Royal College of Ophthalmologist

Research during the 1999 solar eclipse in the United Kingdom found:

“There were no recorded cases of permanent visual loss.”

Safe Eclipse-Viewing Techniques are Easy to Find and Use
